

Design choses

Name: Bob Borsboom

Student Number: 10802975

Course: Data Processing

Week: 3

- Amount of goals on the y axis and season number on the x axis to view a good visualisation
- Interactivity: when moving over the bars, the number of goals of that specific season will be displayed
- Interactivity: when moving over the bars, the bars get black. This is because you clearly can see which bar you are looking at. Black stands out on a white background, right!
- Interactivity: when moving over the bars the pop up block is in black. This is because this is the same color of the bar you are looking at. This looks fine.
- Title in green, because we talk about football
- Bar fill color in green because we talk about football
- Set y range from 750 to see a better difference in the bars. Because all the minimum amount of goals per season is above 750
